General Comment

I do not believe AI holds a place in the future of the US. Based on my expertise as a linguist, it is clear to me that generative AI is not only far from achieving anything close to human like linguistic or cognitive capacity, the choice to adopt human speech-like linguistic traits into AI is completely unethical and deceptive. Companies who tout the capacity of their gen AI products are overhyping and lying to the public—and creating tools to that plagiarize, surveille, and launder bias and errors from input datasets.
