General Comment

Allowing AI and their companies free rein to co-op, steal, and otherwise plagiarize legitimate art, research, books, and any other form of man-made media or products sets a dangerous precedent in allowing the willful disregard of copyright and intellectual property.

Removing "burdensome" hurdles in the development of AI is, in fact, allowing these companies to train their data models using stolen and appropriated information without compensation toward those who created the data (e.g. works of art).

If AI companies can disregard these laws, how long before other companies are allowed to simply disregard other commercial, technological, or ethical safeguards and laws?

We cannot, and should not, condone this behavior or actions for the benefit of a few companies that, in the short-term, have already shown a disregard for anything but their own self-interest, and in the long-term, will harm the livelihood of artists, writers, reporters, directors, actors and many others.

A line must be drawn, not a floodgates opened, because once it is, there will be no closing it.
