General Comment

Giving AI companies the ability to effectively pirate whatever media they want, from anyone, is a terrible idea. They already scrape citizen's intellectual property without permission and then use it to train models and made money off of said models, which in my opinion should be illegal, as this is clearly not fair use.

If piracy is illegal and major companies work so hard to fight it, then why should it be illegal for individual citizens to pirate, but big AI "tech-bro" companies can without any repercussions?

Plus, the era of free and open-source models is already here. America's big companies have clearly lost, why do we need to give them even more power to destroy our country and waste electricity? When I can run a model at home on my RTX 3080, it's clear where the answer lies.

As an artist myself, I find the idea that any company could just use my data without any kind of compensation for myself horrifying and disgusting. It should be opt-in only in my opinion, and regardless, if an artist's work is used for training, they should be financially compensated appropriately.

This proposal to give America's 1% free reign over all our works regardless of copyright laws is clearly open for rampant abuse. Please, I beg you to reject this and uphold copyright law as intended.
