General Comment

This is a violation of national security as artificial intelligence (AI) is built upon theft and collection of content these companies do not own. Artificial Intelligence is overhyped by companies and investors from Silicon Valley that solely want to make a profit and does not care about the end user. Anything you say and/or post on the Internet can and has been used for malicious reasons. This request will only make the situation worse for every American. Artificially generated videos and photos will start to become indistinguishable from those made by humans and can lead to a spread of misinformation never seen before. Students already rely heavily on OpenAI services to cheat on writing assignments, people can generate fake videos to prove a point, someone can make adult and/or violent content of any person they want, regardless if the person they are making a video about consented or not.(For example, someone could have an AI generate a video of a co-worker, neighbor and/or famous celebrity acting inappropriately and claim it as the truth.) Artificial Intelligence holds no place in the future of the United States. As it stands currently, AI has, and will continue to be a tool used by bad actors for malicious purposes as AI steals from the livelihood of not only me but millions of Americans and profits off of that theft. Many people have used artificial intelligence to break laws and far too few have actually been punished for it. Do not believe the lies the developers and investors of these companies are telling you. Artificial Intelligence is an overhyped fad that relies on the theft of data from Americans and is a tool that can be used for copyright infringement, harassment, misinformation and cheating just to name a few. If you don't think AI will be used against you, you are wrong. All it takes is one bad actor to generate a video of you doing something you've never done and spreading it as the truth. AI doesn't care and doesn't discriminate.
