General Comment

Regarding the "Development of an Artificial Intelligence (AI) Action Plan":

AI is an integral part of our modern lives and will continue to evolve alongside society's advancements. It certainly has its place as a valuable tool for assisting in various endeavors. Tasks such as research and complex calculations can be performed with far greater ease than what could be achieved using only a search engine or a library.

However, AI is still a relatively new technology—one that must be regulated for the benefit of both humanity and its development. Allowing this bill to pass would grant OpenAI copyright immunity for its creation and, in effect, permit the product to exploit the work of visual artists, writers, and other creators.

Without any repercussions, this would set a dangerous precedent, encouraging the theft of original content and reducing human-made media to mass-generated output, with no regard to the original creation. This would be similar to allowing a film to utilize a character not yet within the public domain simply because an AI was allowed to bootleg the character, rather than a corporation.

No company should be granted immunity from the consequences of its technology. Such an exemption would be undemocratic and unjust to those who create with their own hands, rather than simply inputting a prompt and letting a machine generate their work. As stated earlier, allowing this to pass would establish a troubling precedent by shielding a company from accountability for its product's impact.

While AI is not inherently something to be condemned, if this plan is approved, it will do nothing but harm online creators while benefiting only the company behind the technology. For the benefit of both AI and human creators, limitations must be imposed on OpenAI, the same as any other company.
