General Comment

As an entrepreneur who both creates comics for mobile publishing and helps SMB enterprises harness the power of data, I recognize both the power and responsibility of putting together a thoughtful Artificial Intelligence Action Plan. Already the free market has leapt to embrace the possibilities of the technology, creating prediction models to more quickly analyze large data sets and guide strategic decision-making. In the right contexts, AI can be a powerful tool. My biggest concern are the legal and ethical implications of training data models on copyrighted works not owned by the user. Any products that leverage generative AI should only be used for educational purposes and should NOT be considered 'sellable.' The creative industry already suffers enough from digital piracy as it is. By establishing a framework for dataset sharing that respects the rights of copyright holders on both sides, the government can lay a foundation for sustainable growth and attain its goals of AI dominance and innovation.
