General Comment

I don't think having copyrighted works entered into a data set for AI without permission is even remotely fair use. Do the entities creating the data sets profit from having copyrighted works in there? Obviously, they do. They are stealing what they clearly see as extremely valuable intellectual property... much of which the creators would not choose to share at all if given the option.

AI is a tool created to make a profit, AI is not a person. AI has no "right to read". AI is for profit. Let the creators of AI buy the right to read content from those willing to sell it to them. We have to pay for copyrighted content, as we should... why should AI companies get it all for free and then get to regurgitate it for profit at the expense of creators?
