General Comment

Generative AI is a threat to working Americans' livelihoods and has no place here. Copyright law must be protected and upheld to protect people's creations so that companies like OpenAI can't profit off of the work of others without compensation. In addition to this, generative AI will dilute the integrity of creative works and the spread of trustworthy information if it is allowed to steal and scrape whatever data the companies/individuals who run them want. The average American does not want or need AI to make their lives better; we are perfectly capable of that without it. The push for AI is overblown through the false narrative that it will make lives better when it will actually steal straight from American pockets.
