## General Comment

I strongly object to any action that would allow companies engaged in research and development of artificial intelligence to train their models on copyrighted work. Content scraping is plagiarism, pure and simple. These companies should play by the same rules as everyone else: proper citation, acknowledgement, and compensation of copyright holders is the only fair way to make use of copyrighted material. Artists, authors, writers, thinkers, and content creators deserve legal protection, and legal recourse must be made available to them in the event that their work is used without their consent.
