General Comment

I am deeply concerned about the rampant use of AI stealing copyrighted material in what is essentially glorified plagiarism for programs that have proven mediocre and ill-equipped to perform the tasks being billed to the public. We do not need investment in a technology built entirely on the piracy of other works with absolutely no credit given, nor do we need the catastrophic effects on the environment and our communities that will surely result from the deployment of such faulty and dangerous systems. No one asked for AI that steals everything and churns out cheap, low-quality copies that only serves to flood our senses with lies and deceit while a tiny handful of people get rich off of piracy. The U.S. government should not have any involvement in generative AI in any regard and should instead seek to limit or ban its use as the business model sets a dangerous precedent with horrific consequences for the public and the world.
