General Comment

AI is absolutely not the future and honestly is a terrible investment in its current state. For all the concern about government spending waste we absolutely should not waste any more money on AI that could be going back to working US citizens. Giving AI potential free rein on once copyrighted material is a waste and terrible idea. AI does not create, it steals and is full of errors. When a CEO of an AI company admits that AI can't survive without the use of copyrighted materials, things already made and protected it suggests a glaring issue that shouldn't be overlooked and something that shouldn't be encouraged by giving it more leeway. There's a real potential for harm by not limiting AI until the technology is proven to be able to handle at least some of the expectations mistakenly placed on it.
