General Comment

Giving AI companies access to anything in the public space is grounds to treat it then as a public good. If AI companies are willing to treat its models as a public utility that any citizen can access as needed, then sure, let them use public information.

However, private works retain their copyright and privileges regardless. We live in a country of contract law. Using someone else's works without permission is a violation of these sorts of laws. If AI cannot survive without these works, then it cannot survive in the legal framework of the world we've chosen to live in and need not exist.
