

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-yo2b-lxbe
Comments Due: March 15, 2025
Submission Type: Web

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-5192

Comment on FR Doc # 2025-02305

Submitter Information

Name: Anonymous Anonymous

General Comment

Concentrating on 'AI' dominance will leave the United States weaker in the long term. Already, there are signs that the AI race has been lost and many of the solutions GenAI professed to provide have not materialized. It has become a source of misinformation and a lot of serious technologists are rightfully ignoring it. Anytime you require accuracy--which is true in most roles-- GenAI will disappoint you with fake information it pulled out of a grab bag of statistics. It has no understanding of what 'correct' information is. Finally, it creates a gigantic cybersecurity risk-- to make your AI 'smarter and more accurate', you would want to hook them up to more and more sources of information. With that in mind, anyone who has access to that AI can ask it anything-- potentially causing a data leak. They are notoriously hard to keep secure and build safeguards around. By integrating all of this technology into corporations and government entities, it just creates opportunities for data theft.

Furthermore, GenAI is discouraging our younger generation, leaving them without the capacity for critical thought (and vulnerable to misinformation). It robs them of perseverance-- after all, if an AI machine can do it better than you can in a couple of seconds, what is the point of trying?

Pursuing AI will weaken our workforce. We need professionals who know what they are doing. Pursue LLMs for specific use cases, but stay clear from GenAI.
