General Comment

Generative AI has no place in the government or any sensible corporation. It only steals the data from other sources and regurgitates what it thinks a user would like to hear, like an over glorified auto-complete. The usage of AI has been shown to increase the strain on our electric grid as a nation, waste precious natural resources to build, maintain, and cool the servers in its use, and infringe on intellectual properties across the board. If generative AI is allowed free reign in all fields, why should a private citizen then be penalized for the download of a movie or music album?

This is a poor use of government resources to try and "save" a flailing business model that with or without this plan passing will find itself bankrupt and obsolete soon enough, just like NFTs and Ponzi Schemes.
