General Comment

Removing restrictions to AI is going to have the opposite effect on national security. Those who know how the tools work will know how to access the information it is given regardless of where they are in the world - all they will have to do is ask the right questions. It is also going to devalue human contribution across the board and drive the economy further down than ever - if companies feel like they no longer need human resources in areas which AI is implemented it will put countless Americans out of jobs. This is all to say nothing of the fact that generative AI models as they are currently being used rely on theft of intellectual property that their users are failing to cite properly. All in all this request should not be accepted in any form.
