General Comment

Generative AI is horrific, creepy, destroying internet search results, spreading false information, and only satisfies those that want instant gratification. Why in search would you want something like that to be able to steal and copy whatever it wants and produce it in a cheaper, crappier way. It's a fad, just like NFTs before them. Generative AI has not done one good thing since it's inception, and China has a better version of it anyway, you're not being innovative here.
