General Comment

I will present and elaborate on three main points for my public comment:

-- I do not believe AI holds a place in the future of the US.

It is extremely susceptible to abuse, as has been seen with regards to court cases using lawyer statements that make reference to other court cases that simply do not exist, as the references were drafted up through the use of AI. The same can be said for the creation of resumés and translations of foreign documents.

-- AI steals from my livelihood as an American and profits off of theft.

Databases are rife with stolen and plagiarized content through scraping methods, as well as sampling from standard users of the internet, who talk about copyrighted intellectual properties. With regards to art, opt-out databases are stealing by default, submitting paid-for and platform-exclusive content of artists without seeking permission in any form, as well as submitting the works of the deceased without contacting the legal holders of the works.

-- AI is overhyped and is being advertised to the eyes of the American public with misinformation.

I believe this point is self-explanatory. An algorithm is no true, or even decent, replacement for human oversight. AI simply magnifies the pitfalls of automation.
