Robert Delgado

3D Animator/Modeler

Re: National Science Foundation's Request for Information on the Development of an Artificial Intelligence (AI) Action Plan

I am a 3D modeler and animator primarily for videogames and other real time 3D applications professionally. I work with many 2D artists, writers, and voice actors whose own work and livelihood is currently under threat by the non-consensual theft perpetuated by AI tech companies. This dangerously unregulated tech may also soon threaten my own field in 3D. Without the work of us artists these companies would have absolutely nothing to work with, as such we deserve proper regulations that guarantee the protection of all our work and appropriate compensation for providing our work to train these models if, and only if, we consent to.

The AI systems made by Big Tech companies like OpenAI (Microsoft) and Google threaten to destroy thousands of American small businesses with their recent demand to create special carve outs in copyright law.

AI systems can only be produced by first training on work made by people. My unique work, and the work of hundreds of thousands of other everyday American creators was taken and fed into these AI systems without our consent or any compensation. They ingest our work, reassemble it, and then sell it back to our clients – directly competing with us and cutting us out of the marketplace.

Now these Big Tech companies are asking this administration to create exceptions and loopholes to make this practice of stealing American creators' copyrighted work legal precedent. They are suggesting that if a machine ingests and reproduces copyrighted work, it is somehow suddenly "fair use".

They seem to believe that anything and everything on the internet – regardless of who owns it – should be theirs for the taking. They claim that if this administration does not allow them to rewrite the law in this way, it will stifle American innovation.

Instead, it will have the opposite effect. The purpose of American copyright law is to protect the incentive to create and innovate.

If we the American people do not own our creations, and everything we put online will be stolen by Big Tech giants, what will be the incentive to create? If everyday Americans create a new innovative piece of computer code, a new visual design, or a new piece of music only to have it immediately stolen by Google and Microsoft, why bother creating it in the first place? How will we possibly make a living doing these things?

Want to protect American innovation? Protect American creators. Do not create new copyright exemptions that allow Big Tech companies to exploit and steal from creators and everyday Americans without permission, compensation, or transparency.

This administration's AI Action Plan should focus not on giving away creator content to Big Tech companies, but rather on ensuring a fair

marketplace with competition:

First, the government should ensure that creators and everyday Americans give effective consent, so that we can decide when and where our work is used by AI systems.

Second, the AI Action Plan should encourage a robust licensing marketplace, so that the incentive to create for small businesses is preserved. Our work has immense economic value, so the value generated by that work should accrue to the original creators, not just Big Tech.

Finally, the AI Action Plan should require transparency from Big Tech companies, requiring them to disclose what material is in their training datasets, and label what content is AI generated.

I am not anti-technology or anti-AI. I am consistently impressed by the capabilities of these AI systems, and find them incredibly useful for many things. But we should not sacrifice the hard work of hundreds of thousands of Americans and give it away to Big Tech by rewriting copyright law.

Thank you for the opportunity to comment on these important issues.
