General Comment

AI tools largely exist to feed off of other creations, credit should be going to those borrowing sources and creations. Instead AI stands to get around copyright by not credited those involved, not linking to the resources it has fed off of, and refusing to upon question.

These AI tools can also be used to generate the offending content. And for security there just isn't the manpower. You can have it but not secured. The US Administration currently shows strong interest in less and less people being involved at the moment too.

I think AI does show how valuable the information age can be for learning and performing new skills and this effort should instead be used for the education of various skills. There's no value in my work as a skill unless neurons are firing in my brain as I'm doing it, this is how we learn. There's value in that.

But we've seen AI implementation in sites like Google or Twitter do ultimately nothing for the platform. For Google, SEO is messed up and takes ages to load now. For Twitter, Grok was just sorta tacked on and it feels like nothing else has happened to platform.

Nobody I know is seriously using grok, and most AI implementation I see from mutuals is solely for memes are making fun of it.

The introduction of bad AI posters from some companies shows the lack of effort they put into their business. This is not something we should be embracing.
