## General Comment

Artificial intelligence has no place in building a just, fair, and democratic nation. It is built by training datasets with data stolen from hard-working Americans, scraping their personal information, professional works and the fruits of their labor without their consent. The current models of AI operate by thievery, in which the people that create the information used in its training are not compensated, yet the conglomerates and tech industrialists who propagate these systems in comparatively few numbers gain immense wealth.

The proliferation of AI is an attack against the working class of America and must be countered. It is also an attack on the intelligence of our population. We let AI do the work, whether it be art, math, or writing. The skills of our population atrophy because we are too lazy to put in effort to enrich and train ourselves.

The John F. Kennedy quote 'We choose to go to the moon in this decade, and do the other things, not because they are easy but because they are hard' resonates particularly strongly here. AI is the tool of the feeble minded, the weak-willed and the sinful sloth.

According to United Nations, US News and World Report, and the University of PA, various surveys and research consistently reports the United States ranks around 31st out of nearly 200 countries in education. That's in the same weight class comparable with countries we have so arrogantly looked down upon as 'second world' including Hungary, Turkey, Argentina and so on.

We are in an education crisis. Teachers are leaving the profession in record numbers due to a lack of support and a lack of resources. AI will not replace them, and if we ever develop the asinine idea that machines could ever hope to achieve such a thing, expect that 31st ranking to plummet even further. AI is notorious for inbreeding, sucking up AI-generated data into its own training sets and creating even more twisted, useless detritus that poisons search results, information sources and our very culture. Our culture dictates demands to our machines, and do not take commands from them. We'd do well to remember this.

Real American brains and American muscle, flesh and blood, took us to the moon. This useless, hollow AI facsimile will drive us into the ground.

Attached is an example of AI posters being proliferated in classrooms. Teachers, burdened with limited time, resources and support, and worse, low quality teachers hired as a result of degenerating standards, have been caught using this. This poster I have included is one of the top results for lung diagram and it has the audacity to claim it is suitable for education. It reflects nothing that has existed in the history of biology and its labeling is entirely gibberish and nonsensical.

Imagine this being applied to mathematics, the general sciences, history. Think those are too good for you and trade schools are more important than higher fields of education? Imagine some fool wiring your house or repairing your car with one of these 'informational' graphics as their guide.

Those of you who fear China and their AI boom? Understand that these same things will apply to them, and their pursuit of AI will doom them just as much as it will doom us should we continue this pointless post nuclear arms race. If you fear this being weaponized by the Chinese, then don't. Allow them to destroy themselves with it, for if it is the tool of the enemy, then we do not need it.

We will not use it.
