General Comment

The fact that copyright protection is being labelled as "unnecessary burdensome requirements" is absolutely shameful and reprehensible. The precedent that this sets is irreparably harmful to the protection of creative works and intellectual property, insinuating that anyone who claims to be training an AI model can simply access any material they want and profit off of it without license or royalty. If this is to be allowed, then what stops anyone from using the pretense of training an AI model to access copyrighted material for free with no consequence? In fact, why should any copyright protections exist at all if such a gaping exception is going to be made? This request spits in the face of all creatives, or indeed anyone who has produced work that could be used in this training. It tells them that their work does not deserve any protection, that any leech off the street should be able to profit off of work that doesn't belong to them. It tells them that they are disposable, and they do not have a place in society.
