General Comment

AI-generated content such as text, images, video, or audio are a deliberate attempt to cut real, working artists and authors out of the creation process in favor of turning a more immediate profit. Furthermore, these AI generation models are trained on thousands of illegal copies of stolen copyrighted content from existing corporations such as Disney, Warner Media, Microsoft, Sony, and more. To further enable this behavior from OpenAI and other generative AI producers would be a highly detrimental blow to the United States economy, where thousands of working artists, authors, editors, and photographers who were already struggling to find work will be out of a job, replaced by robots who are trained on the artists and authors' own stolen content. As a citizen of this country, I implore that you think of the weight that a deregulation of this standard would carry, and the impact it would pose on the average working-class US citizen. Thank you.
