

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-ytqc-23yq
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-5302

Comment on FR Doc # 2025-02305

Submitter Information

Name: Anonymous Anonymous

General Comment

In order to assume this "ai dominance" would be the destruction of patents and copyrights of individuals and large corporations. Allowing AI free use of data in use of training without credit to the original individuals or groups involved allows any form of copyright and patent infringement under the excuse that it was ai sourced.

For example, every day of every year counterfeit and false items pretending to be the american original are becoming more common like fake iphones or brand dessigner goods. Once, the design of a product is placed into the training of an ai. Aspects of original products will continuously occur in aan infinite number of simulations with some becoming more and more closer to the original by stolen design due to AI training prioritizing mimicry and becoming more open access.

AI is required to first mimic in its study of any training process which by design is infringement of patents and copyrights unless the consent of the parties used is received. Allowing AI this open freedom to mimic free of consent toward patents and infringement is opening up the gateway for abuse by anyone that gains access.

As a more relatable example, if Tesla or Trump organization files a patent for a design and an AI replicates the exact design for an individual utilizing prompts until they make the exact same product, then the individual is allowed free use of making a profit of said product to sell ignoring that patent under the guise of AI production.

To maintain an ethical AI dominance would be require consent of use by any involved parties in AI training to prevent AI mimicry from destroying the product market with floods of mimicked styles of goods, products, fashion, arts, or even their own image like photographs that no one could claim ownership of being the original owner over in any form of court of law.

To prove my point to a more comical extent, it would be legally allowed to falsify a video of President Trump's image as an active child sexual predator assaulting a child using AI generation and training without need for the President's approval or consent of his values or image in the training of an AI until it becomes realistic and efficient human-like mimicry, the goal of AI training.
