General Comment

It is sincerely important to everyone that copyrights are protected from AI training. Failure to do so would result in a unstable market where instead of buying someone's work, AI would be used to replicate the work in a slightly altered form without the owner's permission. Human labor would not simply be replaced, but rather stolen and used without providing the proper recompense. If AI cannot exist without infringing on the rights of millions of people to their own work, it should not exist.
