As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-yu23-37ft
Comments Due: March 15, 2025
Submission Type: Web

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-5309

Comment on FR Doc # 2025-02305

Submitter Information

Email: [REDACTED]

Organization: Loam LLC

General Comment

The generic approval for materials collection and carte blanche provided to AI companies is a scourge on the long term meaningful development of most any other technology or materials.

Allowing things like unrestricted and unapproved collection of our materials for training represents considerable harm to Loam LLC's business prospects working in the game and software development space, and has and will result in the theft of our materials without the consent of the company or any authors. When Loam uses music, materials, content, we are required to adhere to modern copyright laws and appropriately compensate third parties for work they do related to our games and applications, as outlined by those third parties. This policy demonstrates not only is a blatant disregard for the efforts and value put into the products we create, but damage to the very materials that could be used to improve AI in the first place if we were consulted and asked to opt in to collection and training.

Biden-era policies on AI should be maintained to ensure meaningful technical developments in all spaces, not just a muted growth only in AI that crushes other industries, and by extension its own training data. If these AI tools are actually worth the trillions these companies allege, surely they can appropriately compensate and contribute back to the economy to provide mutual growth without requiring special treatment.
