General Comment

I am adamantly opposed to allowing big tech companies to continue stealing copyrighted works to train generative AI models. All of the progress we're seeing with this technology right now is fueled by a blatant, whole-sale disregard of copyright law and the rights of both individuals and corporations. We can not and must not reward this flagrant disregard of legal copyright status by undoing U.S. copyright protections. We would never reward a bank that profits by scamming its clients by legalizing the scams they were conducting, or reward a corporation that illegally manipulates its stock prices by legalizing pump and dumps.

While it is true that copyright laws in the U.S. have been extended to an unreasonable number of years to benefit the interest of entities like Disney and Warner Records, the reform being pursued by big tech is an unacceptable extreme in the opposite direction. Not only does it allow them to continue exploiting the work of human creators to feed their data models - models that are subsequently replacing those same creatives' labor - but it would allow anyone, corporation or individual, to pirate and exploit any creative work or software program so long as they claim it is being done for the purpose of AI development.

Please tell these tech companies no. They need to be held accountable for this theft. If the business model of OpenAI is unsustainable without piracy, then their business model is unsustainable period. They should have considered that before violating copyright law.
