General Comment

Regarding Published Document: 2025-02305 (90 FR 9088)

I am Shocked, appalled, and livid that the United States would consider removing copyright protections for enabling the use of AI. This does not give the United States any advantage. This does not give the United States any opportunities. All it would do is to completely undermine the jobs and careers of people working in the United States who rely on copyright to both be recognized and compensated for the works they produce. This will de-incentivize anyone from entering those fields. And the great American exports of culture, of music and movies and television will cease to be. Because no one will be willing to create works that could be immediately "recreated" with artificial intelligence with no compensation to the original creator. What would result would be no less than the death of the American entertainment industry in all its shapes and forms. I urge that this measure not be taken to preserve our country's cultural heritage and dominance.

Good day to you.
