General Comment

Copyright is one of the few things that kept the US competitive in the global market because they would be compensated for their hard labor by having the right to negotiate licensing and terms of use. What OpenAI, Google and other AI developers is not fair use, as they want to turn a profit off the data they are training their models on. But worse, these generative models are intended to undercut the creative industries and hinder any true innovation as GenAI cannot create anything new. The US will fall behind and most consumers looking for creative and innovating media will look outside of the US. The creatives that sustained our domestic industry will be unable to make ends meet and no longer have the incentive to produce new classics. Animation and video games, our most profitable exports, will go the way of manufacturing. For the good of the citizens, and not the corporations, copyrights must be maintained, and should the AI developers need more data, they should pay citizens what they are owed for their labor.
