General Comment

So-called "AI" companies have made all their development and profit off of stolen content and data harvested without consent, producing content based on that stolen information and profiting from it. This is in blatant violation of copyright law, and of the rights and dignity of artists, writers, journalists, and countless others. This cannot be allowed to continue unabated or go unpunished. Measures must be put into place that forbid "AI" companies from grabbing whatever data they want off the internet, throwing it into a blender, and selling the resultant sludge. Companies who have already done this must be punished commensurate to the immense quantity of work they have stolen for their own ends. Creators who put countless hours into their work are being robbed, plagiarized, and having their livelihoods jeopardized as "AI" companies attempt to replace them by taking and reselling the results of their labor without consent. "AI" presents massive dangers to working American creators and to society at large, and it needs to be more regulated, not less.
