Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-5361

Comment on FR Doc # 2025-02305

Submitter Information

Name: Keanu Leon

Email: [REDACTED]

General Comment

Do not allow for this development to take place. On a technical level this will allow for rampant IP theft, for impersonation of any person from civilian to high ranking government officials, and rampant misinformation to take place as their algorithm improves, along with an oversaturation in the creative market as all legitimate creatives will be pressed under a mountain of ai generated material that would be made in mere minutes and look identical since the users are not people who have legit care for the process of creatives. On top of that all parties that the companies will be stealing from will receive zero compensation and larger scale companies will see this as theft of their properties as people begin stealing their work and simply making their own in their homes, likely attempting to profit off of this cheap, instantaneous process through means of selling their ai generated works to the masses that can simply be replicated again and again should one get taken down and another takes it's place. This is a danger on a moral, economic, and legal scale that the ai CEO's will not care to enforce until they make their money and can disappear because they were given free reign to commit copyright theft on a mass scale with zero repercussions for their actions.
