General Comment

AI as it exists should have no future in these United States. As a writer, I see the products marketed as AI as nothing more than theft, relying on stealing the works of myself and artists and journalists like me and my communities for profit while failing to live up to AI investors' and designers' claims.

Private property rights, including intellectual property rights, as well as contractual relationships and obligations underpin America's legal system and are indeed part of why the nation was founded. The plan requested will violate the intellectual property rights of all Americans--anyone who has ever written (their works are protected by copyright!), everyone who has shared a photograph or other visual artwork (their works are protected by copyright!), everyone who has shared their music (their works are protected by copyright!). Anything that can be digitized will be stolen for the enrichment of those investing in AI while providing little of value in return.

I am against providing immunity to copyright and other intellectual property lawsuits to OpenAI and all other AI companies. These companies are obligated to act within the boundaries of law just like all other US entities--and that means contracting with individuals and organizations whose content they wish to use as training material.
