General Comment

"Artificial Intelligence" companies are nothing more than plagiarism machines. They've been trained on thousands of artists styles without consent capable of putting out shoddy knockoffs that would take away from the actual artists' work. Now we're being asked to give them permission to use our stolen work retroactively?! Absolutely not!

There's no actual intelligence behind these programs either. They use mathematical formulas to predict what a human would likely say/do with no fact checking behind it. Sure if you don't mind Google telling you lead is good for you to consume actually.

AI companies also use valuable resources to power their plagiarism engines, taking away power and potable water from communities that need it. Those server farms telling you that lead is a vital part of a balanced diet need to be cooled off somehow.

Long story short, AI is a complete waste of resources and we shouldn't encourage them to continue stealing our work. Might as well make fraud legal to protect manufacturers of fake handbags if you're going to go this route.
