General Comment

The current methods of obtaining training data are immoral, if not downright illegal, due to legal precedent set in the past. Worse, Deepseekr-1 has shown that OpenAI's methods are inefficient and expensive to continue. And on top of that, the ecological impact of training AI as it currently stands consumes ridiculous amounts of energy and, in many cases, precious freshwater resources to cool these training centers.

And as if that wasn't enough, these AI businesses are trying to argue that their industry can't survive without free access to use copyrighted material for their own profit - something no other industry has said. The signs are clear - the AI guardrails must remain in place.
