As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-yycq-sx71
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-5407

Comment on FR Doc # 2025-02305

Submitter Information

Name: Cecily Creativitrux

Email: [REDACTED]

General Comment

Generative computer programs are NOT "artificial intelligence" in any way. They are computer programming designed to streamline data processing. When used in hard science, like the program that was developed to decode the burnt scrolls from ancient Herculaneum, that generative data processing can be a force for good and learning.

But the consumer facing "AI" software, like ChatGPT or Midjourney, are little more than automated programs for taking text and art from other people, and mashing it together into something else and calling it "new".

IF the companies building these programs had done so in any sort of ethical way, using data sets (that is, ART and WRITING) that they had LICENCED from the creators, paying them for the use of their works, then it would have been a reasonable tool. Instead, they STOLE from people, and gave people the ability to use those stolen works in any way possible. It was akin to taking paintings off the walls at the Louvre, and letting people cut them up for collage.

Until so-called "Artificial Intelligence" is developed in ways that DO NOT steal from others, there is NO reasonable place for it in our government.
