General Comment

Not only AI completely ruins the environment and uses so much electricity, AI voids majority of it's products from human passion or emotion. Leaving everything to be artificial, fake, and none caring. Now a good usage for AI is within the medical field and is for detecting and finding a cure for cancer and other illnesses. AI should not be used for writing papers, making art, making movies or cartoons; AI should not be used as a replacement for humans and human jobs. It should only be used for assistance to help better the world than to destroy media literacy and human emotion. As well as using AI for anything a creative human can do is just lazy and non caring.
