General Comment

The dam demands of Google and Open AI are patently foolish. China has significantly stronger copyright protections, and yet Deep Seek has utterly blown the pants off of the American AI venture capital market. If we want to secure the future we need stronger protections against AI company theft. Paying artists, writers, and other creators creates more content for the insatiable AI beast to consume. AI is already running out of data to train on. The way to protect Americas so called AI future is more money, and more subsidies to creators, not to self-cannibalizing AI models that Google and Open AI freely admit can't stop hallucinating complete and utter bovine excrement.
