General Comment

I'm an information professional working in an academic library and find myself horrified daily by the ways AI is being used to plagiarize original work, pilfer personal data, promulgate misinformation, disinformation, bias, racism, and generally make the human world actively worse in innumerable ways.

It is baffling to me that we'd ever empower artificial intelligence over human intelligence. Human innovation. Human creativity. Human reason. Empower it over the very necessary and human need to make mistakes and learn from them, to think critically. I abhor the route AI is taking us as a culture. If we allow the mass theft—for that is what it is—of human-created output, we're no better than China and its refusal to recognize intellectual property, copyright, the sanctity of craft. Is that what we've come to? A country of individuality and innovation, of freedom and autonomy, until it can be subjugated to a machine. Subjugated to inadequate tech bros who value and revere nothing but profit. This is not the future I want. If it's the future the NSF and this country endorses, prepare to enjoy that future where science as we understand and practice it no longer exists.
