General Comment

AI has a lot of potential, but it has a long way to go and having guardrails in place to monitor the development and use of personal data and information to train models for money making endeavors strips all of us of our ability to hold our information private. Additionally, the environmental impact of AI could be devastating to our future and national security. We are inviting all kinds of human disaster to enable technology to replace human capital and place extreme stress on infrastructures meant to support human life.

AI is being powered more by greed than by its potential to both improve and likely negatively impact humans.

It is not time to abandon all efforts at regulation. It is time for sensible approach, as well as a clear view of both the positive and negative impacts of AI.
