General Comment

It is especially telling that some of the world's wealthiest people (Sam Altman, Elon Musk, Mark Zuckerberg) are desperately trying to steal the livelihoods of artists and writers who are barely scraping by, by utterly ruining the concept of copyrighted works as a source of building personal wealth.

If you asked them to give up their patented works, why, it'd be Maoist Socialist Fascism all the way down. I mean, that's their response if you ask them to pay the same tax rates that a self-employed writer or artist pays; the roughly 10% extra that we pay making up the "employer" contribution to income taxes since we're self-employed.

Even *after* ruining the ability of small, self-employed creatives to earn an income, their promises of Generative AI don't work.

Perhaps whomever is reading this has heard of the AI 'hallucination' problem. It's because AI is very cleverly written autocomplete with no actual understanding of its subject matter. AI famously can't count the number of "r" characters in "strawberry" and makes up case citations when used to summarize legal documents for lawyers.

That 'hallucination' problem is fundamental to Generative AI models. While it's taken as an article of faith that "feeding more data into the models" will eventually (don't ask how, it's AI magic!) solve the problem, the reality is that OpenAI now wants to access four times the data than has ever been put on the entire Internet, and, no, please, don't charge *poor little us* while we set 11 billion dollars of investment money on fire to generate 4 billion dollars in revenue, not that we're being open about how much revenue we're generating, we need all of human knowledge! For the FUTURE!

If there must be a formal plan of action for AI, beyond "shut the scam down," it's this:

If your AI company isn't using its own product to write its quarterly earnings reports to regulators and investors, then it's a scam.

Maybe you should ask Sam Altman why he isn't using his own software to replace those expensive accountants and attorneys.

Instead of asking small creative businesses to be happy about the coming AI future by giving up their ongoing rights to intellectual property.
