General Comment

I do not believe AI holds a place in the future of the US, or the world at large, for that matter. AI steals from my livelihood as an American and profits off of theft of artworks and materials from numerous people. AI is massively overhyped and is fleecing the eyes of the American public. Its potential for creating falsified, lifelike videos and images are immensely dangerous, and could lead to wrongful arrests or far worse. It has already been abused to make false pornographic content of public figures, which is then shared widely on the internet. Simply put, championing generative AI is wrong. If you rally behind this dangerous, awful tech, then you're either a moron, evil, or both, and the consequences that will follow will be immense.
