General Comment

AI needs regulation and oversight to prevent theft of intellectual property and to protect the livelihood of original artists and creative talent. AI in fields like technology and medicine serves a purpose to accelerate research and development. Generative AI is unable to produce results without stealing from original art and published works, which means it violates copyright and trademark laws in regards to imitation products, licensing, and unauthorized reproduction. It is plagiarism.

Even AI like Watson assistant or Microsoft co-pilot is a danger to the lower-middle-class workforce and is often riddled with errors and no corrective workarounds. This will deter productivity, not enhance it, and produce substandard results. I firmly object to all uses of AI in creative, administrative, and all other applications that are unnecessary to inject such incompetent software.
