General Comment

If a business is built on stolen work to function, that business should not exist, plain and simple. If my art is found in a model, then that entire model must be destroyed. Either that or you're opening the door to legalize all forms of theft and piracy, destroying all copyright regulation.

It must be utterly illegal for a model to be trained on unauthorized data, and any model found to be trained on that data must be destroyed. Further, any executive at a company found responsible for this should be treated just as someone pirating excess amounts of music or games. Jail time should be a serious deterrent.

I'm watching people sell art of DC Comics characters as if they created Superman themselves; AI allows unsavory individuals to compete with the artists who own the copyright. If you allow AI to train on copyright data, you are allowing it to violate the entire legal precedent of copyright.
