

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-z64r-ytdl
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-5579

Comment on FR Doc # 2025-02305

Submitter Information

Name: Chri Adonia

Email: [REDACTED]

General Comment

Not only is this directive harmful, but undermines the concept that, we as a humanity, cannot create harm. These algorithmic systems are developed upon the words and mindsets set forth by mankind. Our good, our bad, our ugly are all there, yet you people think promptly deregulating something that has not only proven itself to be flawed, but actively something we have little knowledge of the consequences for, is not only appalling, but deadly. This will inevitably lead to self driving cars, uncensored chat bots, robots (in the rare case we DO manage to get sentence from robotics,) and so much more not being punished, including the corporations that formulated their existence. This is all to give companies a pass to allow them to do as they please without regard for how humanity may be impacted, because the ones running the show, aren't the ones who WILL be impacted in a negative manner. I am sick and tired of watching people actively make these decisions as if they weren't going to spell out our end in the near future. Whether it is robotics, AI, the lack of care for the climate, or even the basic conceptualization of how to properly and distinctively enforce laws to get a result that doesn't punish rather reeducate people, it doesn't matter. It is all the same to those people.

It's all the same from the people who put out these notions and ideas. I can assure you, even if you aren't aware of the red stains that will be on your hands if you don't limit and regulate AI and its subsequent successors, it will lead to grave consequences later down the road. Sooner or later, that red stain on your hands will be your blood mixed around the rest of ours for death has no bias. We as a species are losing more and more of what make us human. As robots become more complex, we will reach a tipping point of the uncanny valley that we will be trapped within. Art being one of the biggest components of that and yet you allow that to remain without proper copyright enforcement because why? For a quick buck? Because you dislike the basis of accessibility that mankind has for this form of expression?

This is inevitably the last line of defense before there is no going back and I want each and every person who reads or hears this to understand that the choice promptly put forth on this topic will forever alter the course of our future. AI should be relegated with a list of rulesets to follow for the treatment of data, creative and derivate works, as well as the functions that a robot can perform. Failure to do this will be the equation of writing our own warrant. AI is not a necessity, rather a desire. A desire that, as with most things, can and will pass the limit of too much of one good thing. And when in the future this entire warning gets ignored and you have AI in your shoes as well as your phone, fridge, and toaster, let me be clear. Someone will always be watching, and you will NEVER know the meaning of loneliness.

Choose wisely.
