General Comment

AI programs profit off of theft and unconsented usage of online artist's work with no compensation in any form. The guardrail is to be removed is basic human decency and respect towards the people who have put their time into creating works of art and sharing it online, only for AI's to be trained to replace them without them even knowing.

If America is about the individual's ability to forge their own path and become their own man, AI merely lives off the backs of those who've sought and will seek their own success in this nation. It only teaches people to do become complacent in their lack of skill, relying entirely on a machine to create that which is subpar, and America is not at all about creating a subpar product.

OpenAI and other relevant companies should not be allowed to develop their AI by continuing to steal other's work, and even the current method of obtaining training data is immoral and goes against the ability for every American to thrive using their own skills and capabilities. I do not believe that this change is ethical in any regard, nor is AI for having gone this far already.
