General Comment

This document is approved for public dissemination. The document contains no business-proprietary or confidential information. Document contents may be

reused by the government in developing the AI Action Plan and associated documents without attribution.

While I am not affiliated with any major business or companies of note in relation to AI, I have great concerns regarding these attempts to integrate data theft into our American businesses. As a artist myself, I find that AI negatively impacts our artistic integrity and how we respond to our cultural development. It also allows for the rise of personal theft not only in the creative space, but for the identities of our loved ones and how they are portrayed in such technology. I've seen plenty of disgusting and inappropriate material generated by AI and I do not want my friends or family affected by that.

Not to mention, the means of maintaining AI far exceed the demand. It is far too costing in regards to power that could be used more wisely, especially in rural states that do not have a sustainable power grid to support AI, thus further damaging us in regards to our carbon footprints.

Artificial Intelligence and this form of technology must be kept in line with rules and regulations to prevent predatory material, unstable power usage, and downright abuse of the material that will only set us back from what technology should actually provide for the people.
