General Comment

Reducing AI regulations will not enhance American AI superiority, and instead only undermine other american businesses and intellectual property. Without such industries, the production of new AI data will be greatly reduced, and AI companies will suffer for it. In addition, it will ruin other economic prospects and generally suppress the economy, which is an impact on its own. If AI cannot be created without sacrificing such industries, then such AI is not ready to exist. In no other industry would we subsidize an emerging technology to this extent. AI companies should be well funded in their algorithmic research to reduce the required data for AI training until it can be trained cheaply and with minimal data. Throwing infinite amounts of data at a poorly made algorithm is not to the benefit of the AI, nor to the industries it steals its data from.

Don't deregulate this.
