General Comment

To whom it may concern:

I am responding to the RFI regarding the development of an Artificial Intelligence Action Plan as directed by the Presidential Executive Order of January 23, 2025.

Generative AI systems are built on the appropriation of human-created content without proper compensation or consent. These systems—particularly the foundation models which under-gird them—consume creative works, professional writings, and intellectual property created by Americans, then produce derivative works that directly compete with original creators. As an American worker and lifelong creative writer, and 1 of 2.32 million American workers holding a degree in computer science, I have witnessed how AI is stealing from my livelihood and profiting from this theft. This represents a massive transfer of wealth from working Americans to technology firms with no fair compensation for those whose work is being exploited.

AI is severely over-hyped and is fleecing the eyes of the American public through inflated promises and misleading claims about its capabilities. Most AI systems fail to deliver on their promises when deployed in real-world settings, suffering from unreliability and incorrectness. The administration should be wary of making policy based on industry hype rather than demonstrated value. Before committing national resources to "AI dominance," we the people should demand rigorous, independent evaluation of AI systems' actual capabilities and limitations.

I recommend:

1. Implementing strong copyright protections that prevent AI training on creators', artists', and other copyright-holders' intellectual property without permission and compensation
2. Requiring transparent labeling of AI-generated content
3. Protecting American jobs by restricting AI use that directly jeopardizes the livelihoods of human workers
4. Establishing a moratorium on government AI procurement until proper impact assessments can be conducted

In summary, America should prioritize technology that genuinely fosters human flourishing and honors the dignity of work and creativity.
