General Comment

I am against any use of "artificial intelligence" as it stands in our present day ad it simply scrapes data from many people without discerning the information and formulates a response based on an average of these things put together. It steals data from others without even knowing what their personal research was. That alone can create dangerous setbacks and problems in the future if we rely on it. I am also gravely concerned with how much energy it takes for AI to formulate their responses as well, energy that could have been used to power families' homes or other important buildings and functions. For these reasons I am against this.
