General Comment

AI is an immature technology; it would be foolish to waste government resources on developing private-sector AI capabilities that don't stand to benefit the American people as a whole.

Any action plan should include reasonable safeguards - requiring AI generated images to be labelled, in some way; requiring AI engines to be able to be interrogated as to how they have generated certain outputs so they can be checked and refined; and importantly, respecting the copyrights of American writers and artists. Generative AI should only be trained on public domain or legitimately licensed works, requiring artist or author permission for the latter.

Until we have safeguards like these, the American public at large will continue to be largely indifferent or hostile to AI generated products, ensuring that the commercial failure we have seen so far will continue.

That trust factor is essential.
