Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-5652

Comment on FR Doc # 2025-02305

Submitter Information

Name: Foster Elmendorf

General Comment

Removing the copyright guardrails for AI would be disastrous for Americans across all spectrums. It would remove any individual's rights to the ownership of the work they create as well as flooding the market with massive amounts of churned out content, making it harder than ever for people to find content that appeals to them. Anyone could take an existing piece of media, be it a book, movie, or TV series, and filter it through AI to release it far cheaper than it cost to produce originally.

AI is overhyped by those who wish to use it for immediate profit, and when the technology eventually crashes, it will leave the bag holders far poorer for it; if the US Government invests in this, it will leave the tax payer and American creatives in that position, having lost out on our hard work and far poorer as a country for it.

When AI slop has no cultural appeal but is all America is producing, people in both foreign and domestic markets will look elsewhere for their entertainment and art, leaving the US with even less influence globally than we have now.

AI's place in our society should be focused on massive data handling and mathematical grunt work; AI has a future in America, but the focus shouldn't be on copyrighted material, it should be in academic research, data parsing, and medical aid. Much good could be done in those areas with the help of future AI models, and would actively improve the health and well-being of the average American.
